

Requirements Specification: Aircraft Avionics Upgrade Project

REQ-001: The avionics system shall report GPS position accuracy within 2 meters CEP (Circular Error Probable). Status: In progress.

REQ-002: The flight management system shall interface with the legacy autopilot module via an ARINC 429 data bus. Status: In progress.

REQ-003: The system shall log all avionics events with timestamp accuracy of 10 milliseconds or better. Status: Completed.

REQ-004: The cabin display unit shall support a night-vision-compatible lighting mode. Status: Not started.

REQ-005: The system shall complete its cold boot sequence in under 45 seconds. Status: In progress.
